Description: Learning communities bring the collective power of the full staff to bear on improving student achievement. In this course participants will review successful models of collaborative culture, and identify the traits and skills educators will need in order to work together in an environment of trust and professional inquiry. They will explore the complexities of the change process, including dealing with resistance and conflict, and mobilizing support for improvement. They will take a systems approach to organizational learning and uncover the illusions which cause leaders to self-destruct.

Objectives: This course will enable participants to: (a) develop a familiarity with important thinkers who are currently influencing educational leadership and organizational structure. (b) explore research in organizational psychology, organizational culture, group process, systems analysis, and the process of change; (c) read and synthesize written materials on these topics; and (d) conduct an in-depth investigation into critical aspects of building a successful learning organization and present their findings in oral and written form.

Procedures for achieving the objectives: The above objectives will be met through online class activities and assignments, other readings, library research, field studies and reports, a PowerPoint presentation of key concepts of learning organizations, and one in-depth term project.

Readings: Peter Senge, *Schools That Learn*. Doubleday/Currency, New York, 2000.

Additional readings will be assigned from Richard DuFour, Margaret Wheatley, and others found in library materials, periodicals (newspapers, professional journals, monographs, etc.) and online resources.

Attendance / participation policy: Class participants are responsible for completing all online class discussion, activities and assignments by posted due dates.

Grading Procedures: Class participants will be evaluated on (a) satisfactory completion of term project; (b) analysis, synthesis and discussion of articles by leading researchers and thinkers; (c) class presentations (PowerPoint) on selected books; and (d) participation in class discussions (including reactions to readings, current topics, peer presentations),

group activities and other online assignments.

Topical Overview, Activities, and Readings: (subject to change)

Introduction to and overview of the course; What is a iLearning Organization?"

(Readings: Senge: Part I Orientation.)

The Five Disciplines overview with emphasis on the ladder of inference and systems thinking. (Readings: Senge: Part II A Primer to the Five Disciplines.)
