UNIVERSITY

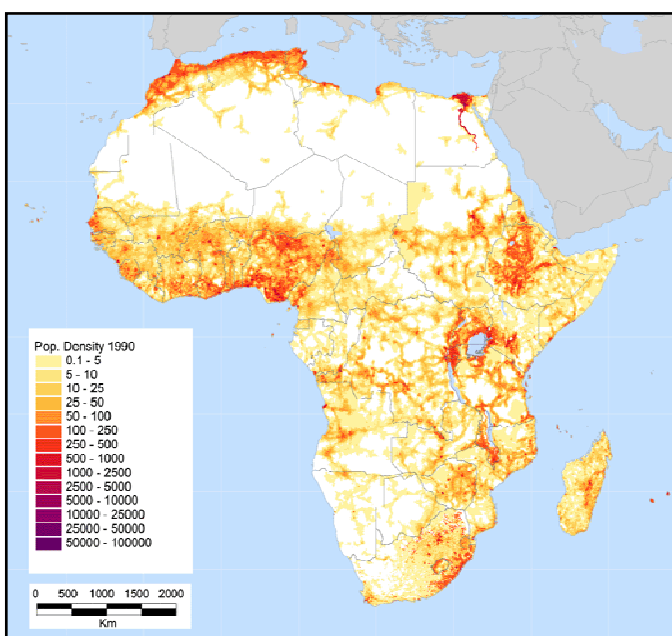

WORLDWIDE

The Department of **INTERNATIONAL RELATIONS** announces a Lecture, in the regular INTL 5600 Area studies course:

DEMOGRAPHICS OF AFRICA

The population growth in Africa is garnering increasing attention, and studies on the issue of demographic transition are beginning to reveal interesting features of the African scene. Why is the demographic transition coming so late to Africa? What are the social, economic and political consequences of the demographic explosion, for Africa as well as for other regions?

This presentation aims, through a presentation on the theory of demographic transition and on the keys for reading demographic behavior in Africa, to shed light on the challenge for African states in dealing with their burgeoning populations.

Webster is proud to invite a speaker with considerable academic and methodological insight:

Michel Oris Professor of Demography and Social History, University of Geneva.

Monday November 6, 2006
Classroom: A 12/14

18:30-22:30
19:30-20:00

Course
Dinner Break
