

Exercise Science (BS)

This program is offered by the College of Science and Health/ Natural Sciences and Mathematics Department and is only available at the St. Louis main campus.

STEM program

Program Description

The bachelor of science (BS) in exercise science provides an excellent academic foundation for students choosing to pursue graduate and professional degrees in a wide array of health careers, such as exercise physiology, occupational therapy, physical therapy, medicine and athletic training. Because these fields require post-baccalaureate degrees, students will need to take additional prerequisites that apply to their field of interest. Students who choose not to pursue a post-baccalaureate degree can pursue a career as a personal trainer, wellness coordinator, strength and conditioning coach or in corporate wellness.

Learning Outcomes

Upon completion of the exercise science program, students will be able to:

- Identify and integrate basic principles of Biology, Chemistry and Physics as they apply to human movement and kinesiology.
- Apply basic principles of human movement and kinesiology to clinical settings.
- Incorporate the best available evidence, their clinical skills, and the needs of the patient to maximize outcomes.
- Evaluate the differential impact of exercise science on diverse populations.
- Analyze findings from current scientific research from the disciplines of exercise science.
- Discuss the importance of responsible global citizenship, professional attitude, and ethical behavior as it applies to their chosen profession.
